

UNITED STATES
SECURITIES AND EXCHANGE COMMISSION
WASHINGTON, D.C. 20549

FORM 8-K

CURRENT REPORT

Pursuant to Section 13 or 15(d) of the Securities Exchange Act of 1934

Date of Report (Date of earliest event reported): August 3, 2026

CRISPR THERAPEUTICS AG

(Exact name of registrant as specified in its charter)

Switzerland
(State or other jurisdiction
of incorporation)

001-37923
(Commission File Number)

Not Applicable
(IRS Employer
Identification No.)

Baarerstrasse 14
6300 Zug, Switzerland
(Address of principal executive offices)

Not Applicable
(Zip Code)

Registrant's telephone number, including area code: 41 (0)41 561 32 79

(Former name or former address, if changed since last report)

Check the appropriate box below if the Form 8-K filing is intended to simultaneously satisfy the filing obligation of the registrant under any of the following provisions:

- ☐ Written communications pursuant to Rule 425 under the Securities Act (17 CFR 230.425)
- ☐ Soliciting material pursuant to Rule 14a-12 under the Exchange Act (17 CFR 240.14a-12)
- ☐ Pre-commencement communications pursuant to Rule 14d-2(b) under the Exchange Act (17 CFR 240.14d-2(b))
- ☐ Pre-commencement communications pursuant to Rule 13e-4(c) under the Exchange Act (17 CFR 240.13e-4(c))

Securities registered pursuant to Section 12(b) of the Act:

Title of each class	Trading Symbol(s)	Name of each exchange on which registered
Common Shares, nominal value CHF 0.03	CRSP	The NASDAQ Global Market

Indicate by check mark whether the registrant is an emerging growth company as defined in Rule 405 of the Securities Act of 1933 (§ 230.405 of this chapter) or Rule 12b-2 of the Securities Exchange Act of 1934 (§ 240.12b-2 of this chapter).

Emerging growth company
☐

If an emerging growth company, indicate by check mark if the registrant has elected not to use the extended transition period for complying with any new or revised financial accounting standards provided pursuant to Section 13(a) of the Exchange Act.
☐

Item 2.02 Results of Operations and Financial Condition.

On August 3, 2026, CRISPR Therapeutics AG announced its financial results for the quarter ended June 30, 2026 and other business highlights. The full text of the press release issued in connection with the announcement is furnished as Exhibit 99.1 to this Current Report on Form 8-K.

The information in this Form 8-K (including Exhibit 99.1) shall not be deemed “filed” for purposes of Section 18 of the Securities Exchange Act of 1934, as amended (the “Exchange Act”), or otherwise subject to the liabilities of that section, nor shall it be deemed incorporated by reference in any filing under the Securities Act of 1933, as amended, or the Exchange Act, except as expressly set forth by specific reference in such a filing.

Item 9.01 Financial Statements and Exhibits.

(d) Exhibits:

The following exhibits shall be deemed to be furnished, and not filed:

Exhibit No.	Description
99.1	Press Release by CRISPR Therapeutics AG, dated August 3, 2026
104	Cover Page Interactive Data File (embedded within the Inline XBRL document)

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the undersigned thereunto duly authorized.

CRISPR Therapeutics AG

Date: August 3, 2026

By: /s/ Samarth Kulkarni
Samarth Kulkarni, Ph.D.
Chief Executive Officer

CRISPR Therapeutics Provides Business Update and Reports Second Quarter 2026 Financial Results

ZUG, Switzerland and BOSTON, August 3, 2026 – CRISPR Therapeutics (Nasdaq: CRSP) today reported financial results for the second quarter ended June 30, 2026.

"The second quarter reflected strong execution across CRISPR Therapeutics' portfolio and platform," said Samarth Kulkarni, Ph.D., Chairman and Chief Executive Officer of CRISPR Therapeutics. "CASGEVY's momentum continued to build, highlighted by the FDA's approval for children as young as 2 years old, while we expanded our *in vivo* pipeline with the initiation of Phase 1 clinical trials for CTX340 for refractory hypertension and CTX460 for alpha-1 antitrypsin deficiency. We enter the second half of 2026 well positioned, with a number of important milestones ahead across our pipeline."

Recent Highlights and Outlook**Hemoglobinopathies and CASGEVY® (exagamglogene autotemcel)**

CASGEVY is a non-viral, *ex vivo*, CRISPR/Cas9 gene-edited cell therapy for eligible patients with SCD or TDT that has been shown to reduce or eliminate vaso-occlusive crises (VOCs) for patients with SCD and transfusion requirements for patients with TDT. CASGEVY is approved in 39 countries across North America, Europe, and the Middle East.

- CASGEVY generated second quarter 2026 revenue of \$76 million, representing 78% growth quarter-over-quarter and 151% growth year-over-year.
- The U.S. FDA recently approved CASGEVY in children 2 years of age and older with SCD or TDT, the first genetic therapy indicated for children as young as 2 years for both SCD and TDT. With this approval, achieved in just 53 days post filing, approximately 5,500 patients with SCD or TDT may be eligible for treatment with CASGEVY for the first time. Regulatory submissions have also been completed for CASGEVY in the Kingdom of Saudi Arabia (KSA) and the United Kingdom (U.K.) for the treatment of children 5 to 11 years of age.
- In May, Vertex secured reimbursement for CASGEVY for eligible patients 12 years and older with SCD or TDT in Germany. Efforts remain underway with government and reimbursement authorities globally to ensure sustainable access for eligible patients.
- CRISPR Therapeutics continues to advance its *in vivo* hematopoietic stem cell editing approach using lipid nanoparticle (LNP)-mediated delivery. This approach has the potential to expand the addressable patient populations for SCD and TDT.

In Vivo Liver Editing

CRISPR Therapeutics continues to advance a diversified portfolio of *in vivo* gene editing programs leveraging its proprietary liver-directed LNP delivery platform.

- Development of CTX310®, an investigational therapy targeting angiotensin-related protein 3 (ANGPTL3), continues in a Phase 1b clinical trial, with the Company prioritizing indications in severe hypertriglyceridemia (sHTG) and refractory hypercholesterolemia. U.S. trials have been initiated, with ex-U.S. trials ongoing.
 - CRISPR Therapeutics announced that a late-breaking abstract entitled "*Durability of Effects of CTX310, a CRISPR-Cas9 Gene Editing Targeting ANGPTL3*" has been accepted for presentation at the European Society of Cardiology (ESC) Congress 2026 in Munich, Germany, on August 28 at 4:30 p.m. CET to discuss a clinical update of the ongoing Phase 1a trial. The Company also expects to provide a Phase 1b clinical update in the second half of 2026.
 - CTX340™, targeting angiotensinogen (AGT), has received IND clearance from the FDA. The Company has initiated a Phase 1 clinical trial for patients with refractory hypertension.
-

- CTX460™, targeting SERPINA1 for the treatment of alpha-1 antitrypsin deficiency (AATD), is the first investigational candidate generated from the Company's SyNTase™ editing platform. The Company has initiated a Phase 1 clinical trial for CTX460.
- CRISPR Therapeutics' pipeline of preclinical *in vivo* gene editing candidates includes CTX321™, the Company's next-generation LPA program, which is progressing through IND/CTA-enabling studies. The candidate incorporates an optimized guide RNA that delivered approximately two-fold greater potency in preclinical models, paired with the same LNP delivery system used previously. An Lp(a) program update is anticipated in 2026.

siRNA-based Programs

CRISPR Therapeutics' small interfering RNA (siRNA)-based portfolio includes clinical-stage programs targeting cardiovascular and thromboembolic diseases, developed in collaboration with Sirius Therapeutics.

- CTX611 (SRSD107), a long-acting siRNA therapeutic targeting Factor XI (FXI), is advancing through a Phase 2 clinical trial in patients undergoing total knee arthroplasty (TKA). The Company expects to provide an update in the second half of 2026.
- CTX611 has the potential to address a broad range of thromboembolic and clotting-related indications, including atrial fibrillation (AF), venous thromboembolism (VTE), ischemic stroke, cancer-associated thrombosis (CAT), thrombosis in chronic kidney disease (CKD), peripheral vascular disease (PVD), and chronic coronary artery disease (CAD), collectively representing a multi-billion-dollar market opportunity. CRISPR Therapeutics is expected to lead global Phase 3 development, with Sirius Therapeutics overseeing development activities in greater China
- CRISPR Therapeutics has the option to nominate up to two additional siRNA targets for research and development. An update is expected in 2026.

Autoimmune Disease and Immuno-Oncology

Zugocabtagene geleucel (zugo-cel; formerly CTX112™) continues to advance across both autoimmune disease and hematologic malignancies.

- In autoimmune disease, zugo-cel is currently being evaluated in two ongoing Phase 1 basket trials: a rheumatology basket including systemic lupus erythematosus (SLE), systemic sclerosis (SSc), and inflammatory myositis (IM); and a hematology basket in immune thrombocytopenic purpura (ITP) and warm autoimmune hemolytic anemia (wAIHA).
 - In addition, a third Phase 1 trial has been initiated in autoimmune neurologic diseases. The trial, includes progressive multiple sclerosis (PMS), neuromyelitis optica spectrum disorder (NMOSD), myelin oligodendrocyte glycoprotein antibody-associated Disease (MOGAD), N-methyl-D-aspartate receptor (NMDAR) and leucine-rich glioma-inactivated Protein 1 (LGI1) autoimmune encephalitis (AIE), and stiff person syndrome (SPS).
 - Enrollment across the zugo-cel autoimmune clinical program continues in SSc, IIM, SLE, ITP, and wAIHA with multiple clinical sites activated globally. The Company expects to provide further updates in the second half of 2026.
 - In immuno-oncology, the Phase 1/2 clinical trial of zugo-cel in B-cell malignancies is ongoing, with updates anticipated in the second half of 2026. The Company has also initiated a combination study evaluating zugo-cel with pirtobrutinib in aggressive B-cell lymphomas, under the Company's existing collaboration with Lilly.
 - The Company's autoimmune and immuno-oncology programs are supported by a wholly-owned GMP manufacturing facility in Framingham, Massachusetts. The facility provides end-to-end production capabilities across the cell therapy portfolio, supports both clinical and future commercial supply and enables an industry-leading cost of goods.
-

CRISPR Therapeutics is also advancing a proprietary *in vivo* CAR-T platform with potential applications across autoimmune disease and oncology.

- The Company is pursuing two complementary modalities, supported by an antibody-conjugated LNP delivery system that enables targeted delivery to immune cells: a transient, re-dosable CAR-T leveraging engineered mRNA, and a non-viral, integrating CAR-T employing next-generation site-specific integration technologies.
- Both programs are currently in the IND/CTA-enabling phase, focused on a best-in-class profile.

Regenerative Medicine

- CRISPR Therapeutics continues to advance its regenerative medicine program in diabetes. The Company is developing CTX213™, a deviceless beta cell replacement candidate for Type 1 diabetes, consisting of unencapsulated precursor islet cells derived from edited induced pluripotent stem cells (iPSCs). CTX213 has demonstrated compelling preclinical efficacy through direct administration and is progressing toward the clinic. The Company expects to provide additional updates as development progresses.

Second Quarter 2026 Financial Results

- **Cash Position:** Cash, cash equivalents, and marketable securities were \$2,364.4 million as of June 30, 2026, compared to \$1,975.8 million as of December 31, 2025. The increase in cash was primarily driven by net proceeds of \$585.4 million from the issuance of convertible senior notes in March 2026, offset by operating expenses.
- **R&D Expenses:** R&D expenses were \$67.2 million for the second quarter of 2026, compared to \$69.9 million for the second quarter of 2025. The decrease in R&D expense was primarily attributable to a decrease in employee-related costs and facility-related expenses, offset by an increase in license fees.
- **Acquired In-Process R&D Expenses:** Acquired in-process R&D expenses were \$2.5 million for the second quarter of 2026, compared to \$96.3 million for the second quarter of 2025. Acquired in-process R&D expenses for the second quarter of 2026 were not material. Acquired in-process R&D expenses for the second quarter of 2025 were related to costs incurred upon entering the Sirius Agreement in 2025.
- **G&A Expenses:** General and administrative expenses were \$17.6 million for the second quarter of 2026, compared to \$18.9 million for the second quarter of 2025. The decrease in G&A expense was primarily attributable to a decrease in employee-related costs, including stock-based compensation expenses.
- **Collaboration Expense:** Collaboration expense, net, was \$40.3 million for the second quarter of 2026, compared to \$45.2 million for the second quarter of 2025. The decrease was primarily attributable to an increase in the Company's share of CASGEVY revenue.
- **Net Loss:** Net loss was \$91.2 million for the second quarter of 2026, compared to a net loss of \$208.5 million for the second quarter of 2025.

About CASGEVY® (exagamglogene autotemcel [exa-cel])

CASGEVY® is a non-viral, *ex vivo* CRISPR/Cas9 gene-edited cell therapy for eligible patients with sickle cell disease (SCD) or transfusion-dependent beta thalassemia (TDT), in which a patient's own hematopoietic stem and progenitor cells are edited at the erythroid specific enhancer region of the BCL11A gene. This edit results in the production of high levels of fetal hemoglobin (HbF; hemoglobin F) in red blood cells. HbF is the form of the oxygen-carrying hemoglobin that is naturally present during fetal development, which then switches to the adult form of hemoglobin after birth. CASGEVY has been shown to reduce or eliminate VOCs for patients with SCD and transfusion requirements for patients with TDT. CASGEVY is approved for eligible SCD and TDT patients 12 years and older by multiple regulatory bodies around the world.

About the CRISPR Therapeutics - Vertex Collaboration for CASGEVY

CRISPR Therapeutics and Vertex established a strategic research collaboration in 2015 to discover and develop therapies leveraging CRISPR/Cas9 technology to address the underlying genetic causes of human disease. CASGEVY is the first approved therapy to emerge from this collaboration. Under an amended agreement, Vertex leads global development, manufacturing, and commercialization of CASGEVY, and Vertex and CRISPR Therapeutics share profits and program costs on a 60/40 basis. Vertex is the manufacturer and exclusive license holder of CASGEVY.

About *In Vivo* Liver Editing Programs

CRISPR Therapeutics has established a proprietary lipid nanoparticle (LNP) delivery platform to enable gene editing in the liver using both CRISPR/Cas9 and its novel, proprietary SyNTase™ editing technology. The Company's *in vivo* portfolio includes three cardiovascular programs: CTX310, targeting angiopoietin-related protein 3 (ANGPTL3), in development for heterozygous and homozygous familial hypercholesterolemia, mixed dyslipidemias, and severe hypertriglyceridemia; CTX340, targeting angiotensinogen (AGT), in development for refractory hypertension; and CTX321, targeting LPA, in development for patients with elevated lipoprotein(a) [Lp(a)]. In addition, the Company's disclosed development candidates also include CTX460™, targeting SERPINA1 using SyNTase editing, for the treatment of alpha-1 antitrypsin deficiency (AATD).

About Zugocabtagene Geleucel (zugo-cel; formerly CTX112)

Zugocabtagene geleucel (zugo-cel) is a wholly-owned, allogeneic chimeric antigen receptor (CAR) T cell therapy product candidate targeting Cluster of Differentiation 19 (CD19), in development for both autoimmune and immuno-oncology indications. The off-the-shelf therapy leverages CRISPR/Cas9 for targeted gene knockout and CAR insertion, enabling immune evasion and enhanced T effector cell potency, and is administered following a standard lymphodepletion regimen without the need for human leukocyte antigen (HLA) matching. Zugo-cel is being investigated in ongoing clinical trials in adult patients with systemic lupus erythematosus (SLE), systemic sclerosis (SSc), inflammatory myositis (IM), immune thrombocytopenic purpura (ITP), warm autoimmune hemolytic anemia (wAIHA), progressive multiple sclerosis (PMS), neuromyelitis optica spectrum disorder (NMOSD), myelin oligodendrocyte glycoprotein antibody-associated Disease (MOGAD), N-methyl-D-aspartate receptor (NMDAR) and leucine-rich glioma-inactivated Protein 1 (LGI1) autoimmune encephalitis (AIE), and stiff person syndrome (SPS), as well as in adult patients with relapsed or refractory B-cell malignancies.

About CTX611 (SRSD107)

CTX611 is a novel double-stranded, long-acting siRNA, designed to target the human coagulation factor XI, or FXI, messenger RNA and inhibit FXI protein expression. Through modulation of the intrinsic coagulation pathway, CTX611 is intended to provide anticoagulant and antithrombotic effects with a decreased risk of bleeding compared to other anti-thrombotics. Supported by clinical experience conducted by Sirius Therapeutics in two Phase 1 clinical trials, the Company and Sirius Therapeutics are developing CTX611 as a long-acting FXI inhibitor with the potential to support infrequent, including semi-annual, subcutaneous administration.

About the CRISPR Therapeutics - Sirius Therapeutics Collaboration for siRNA

CRISPR Therapeutics and Sirius Therapeutics entered into a strategic collaboration in 2025 to develop and commercialize siRNA therapies for thromboembolic disorders and other serious diseases. The lead program, CTX611, is a long-acting siRNA targeting FXI, which the companies will co-develop on an equal cost-and-profit-sharing basis. CRISPR Therapeutics will lead commercialization in the U.S., while Sirius will lead commercialization in greater China. The collaboration also provides CRISPR Therapeutics with the option to license up to two additional siRNA programs.

About CRISPR Therapeutics

CRISPR Therapeutics is a leading biopharmaceutical company focused on developing transformative gene-based medicines for serious human diseases. Founded over a decade ago as an early pioneer in CRISPR/Cas9 gene editing, the Company has evolved from a pioneering research-stage organization into an industry leader, marking a historic milestone with the approval of CASGEVY® (exagamglogene autotemcel [exa-cel]), the world's first CRISPR-based therapy, for eligible patients with sickle cell disease and transfusion-dependent beta thalassemia. Today, CRISPR Therapeutics is advancing a broad, diversified pipeline spanning hemoglobinopathies, cardiovascular disease, autoimmune disease, oncology, regenerative medicine and rare diseases. The Company is also expanding its gene editing toolkit through

SyNTase™ editing, its novel, proprietary platform designed to enable precise, efficient, and scalable gene correction. To accelerate its impact, CRISPR Therapeutics has established strategic collaborations with leading biopharmaceutical partners, including Vertex Pharmaceuticals. CRISPR Therapeutics AG is headquartered in Zug, Switzerland, with its wholly-owned U.S. subsidiary, CRISPR Therapeutics, Inc., and R&D operations based in Boston, Massachusetts and San Francisco, California. CRISPR Special Note Regarding Forward-Looking Statements

Statements contained in this press release regarding matters that are not historical facts are “forward-looking statements” within the meaning of the Private Securities Litigation Reform Act of 1995. Because such statements are subject to risks and uncertainties, actual results may differ materially from those expressed or implied by such forward-looking statements. Such statements include, but are not limited to, statements made by Dr. Kulkarni in this press release, as well as regarding any or all of the following: (i) CRISPR Therapeutics preclinical studies, clinical trials and pipeline products and programs, including, without limitation, manufacturing capabilities, status of such studies and trials, potential expansion into new indications and expectations regarding data, safety and efficacy generally; (ii) data included in this press release, as well as the ability to use data from ongoing and planned studies and clinical trials for the design and initiation of further studies and clinical trials; (iii) CRISPR Therapeutics strategy, goals, anticipated financial performance and the sufficiency of its cash resources; (iv) plans and expectations for the commercialization of and anticipated benefits of CASGEVY, including anticipated patient access to CASGEVY; (v) regulatory submissions and authorizations, including timelines for and expectations regarding regulatory agency decisions; (vi) the expected benefits of its collaborations; and (vii) the therapeutic value, development, and commercial potential of gene editing technologies and therapies, including CRISPR/Cas9 and SyNTase, as well as other technologies. Risks that contribute to the uncertain nature of the forward-looking statements include, without limitation, the risks and uncertainties discussed under the heading “Risk Factors” in its most recent annual report on Form 10-K and in any other subsequent filings made by CRISPR Therapeutics with the U.S. Securities and Exchange Commission. Existing and prospective investors are cautioned not to place undue reliance on these forward-looking statements, which speak only as of the date they are made. We disclaim any obligation or undertaking to update or revise any forward-looking statements contained in this press release, other than to the extent required by law.

This press release also contains information regarding our industry, our business and the markets for certain of our product candidates, including data regarding the estimated size of those markets, and the incidence and prevalence of certain medical conditions. Unless otherwise expressly stated, we obtained this industry, business, market and other data from market research firms and other third parties, including medical publications, government data and similar sources. Information that is based on estimates, forecasts, projections, market research or similar methodologies is inherently subject to uncertainties and actual events or circumstances may differ materially from events and circumstances reflected in this information. This press release discusses investigational therapies and is not intended to convey conclusions about efficacy or safety as to those investigational therapies or uses of such investigational therapies. There is no guarantee that any investigational therapy will successfully complete clinical development or gain approval from applicable regulatory authorities.
